The Thirty-Six Braids

A field guide to the combinations of genius

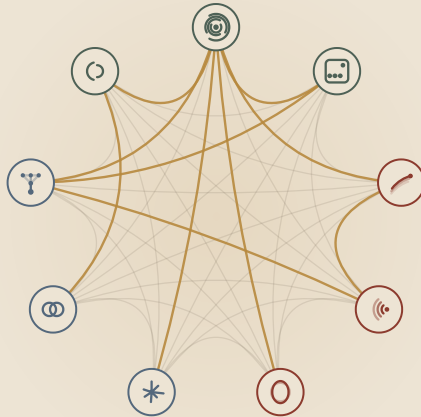

Your genius is rarely one gift. It is almost always two —
braided into something rare.

Genius is a braid.

Genius is rarely a single gift. It is almost always two of the nine domains braided together — and the pairing, not either strand alone, is what makes a person rare.

There are exactly thirty-six such pairings. Ten are **canonical** — common and distinct enough to carry a name of their own: the Craftsman, the Translator, the Storyteller, and seven more. The other twenty-six carry the map to its edges. Together they chart the whole field of combined human ability.

The Nine Domains

Every braid is two of these. Three families of three — the body, thought, and the field between.

SOMA *the body*

Kinetic

Learns and reproduces movement faster and cleaner than baseline.

Sensory

Resolves signal — pitch, colour, flavour, texture — others cannot.

Adaptive

Outlier bodily capacity — range, endurance, recovery, control.

MIND *thought*

Analytic

Compresses complexity into pattern; sees the structure and the flaw.

Mnemonic

Retains and retrieves detail — names, dates, sequences — past baseline.

Generative

Produces many novel combinations; fishes hits from sheer volume.

FIELD *the between*

Relational

Reads people — mood, want, state — fast and beneath the surface.

Expressive

Transmits what is in one head into another, whole.

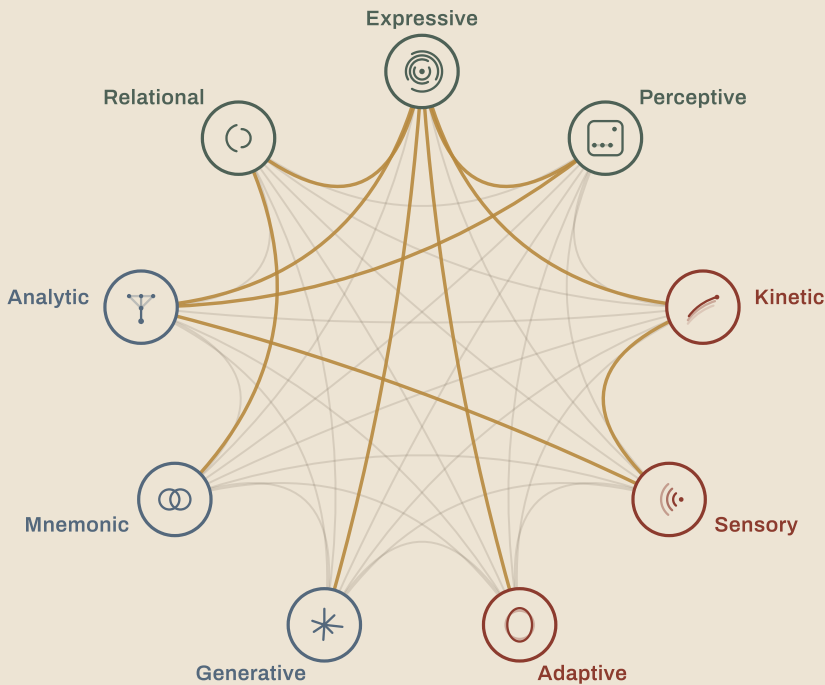

Perceptive

Reads the field — layout, change, the thing out of place.

The Constellation

Nine domains on a ring, grouped into their three families. Every faint thread is one of the thirty-six pairings; the gold threads are the ten named braids.

— A named braid — One of the 36 pairings

Expressive anchors six of the ten — the power to transmit multiplies whatever it joins.

The Canonical Ten

& WHERE YOU SEE THEM

Ten combinations distinct enough to stand as callings of their own.

The Rarest Braids

Where Mind meets Field, rarity compounds. The Connoisseur (Sensory + Analytic) is rarest of all — and earns a name among the Ten.

	Maker	KINETIC + GENERATIVE	Invents in physical media
	Athlete	KINETIC + PERCEPTIVE	Reads the field, answers with the body
